

Multi-Sensor Fusion Tracker

SUNHILLO's Multi-Sensor Fusion Tracker has the capability of processing multiple targets from different sensors for the same target, in order to correlate them into a single track.

- Handles up to 600 plots per sensor per scan
- Handles up to 800 tracks per sensor continuously
- Handles up to 5000 fused (system) tracks continuously
- Tracks Search, Discrete and Non-Discrete beacon targets
- Provides continuous Track Data Filtering
- Outputs Track Data in OTG Format
- Supports up to 24 Sensors

- a plug-in to the Sunhillo SGP product.
