Sunhillo Corporation Announces Longport Platform Technical Update

Sunhillo Longport has completed a technical update maintaining form, fit, and function

West Berlin, NJ, July 17, 2019 – Sunhillo Corporation is pleased to announce for 2019, a technical update that has been performed on the Longport product line to upgrade the system capabilities and address product longevity. The Longport system update is a form, fit, and function direct replacement for the current Longport with multiple upgrades; some of the technology highlights now include, a hardware encryption capability, a faster 800 MHz dual core processor, increased cooling and a lighter aluminum chassis.

The updated Longport components are fully backward compatible with the previous Longport allowing Processor Control Modules, Ethernet Switch Modules, and Power Supply Module cards to be interchanged between the two generations of systems.

Dave Whitman, President/CEO of Sunhillo stated, "We are very excited for this next iteration of the company's flagship product, the Longport. Longport's to date have been deployed to over 256 FAA facilities for the STARS program and throughout the world providing mission-critical surveillance data distribution and conversion. This latest technical upgrade has substantial enhancements and ensures that the Longport will be sustained and reliable for the foreseeable future."
