

## Surveillance Data Test Tool

## Features

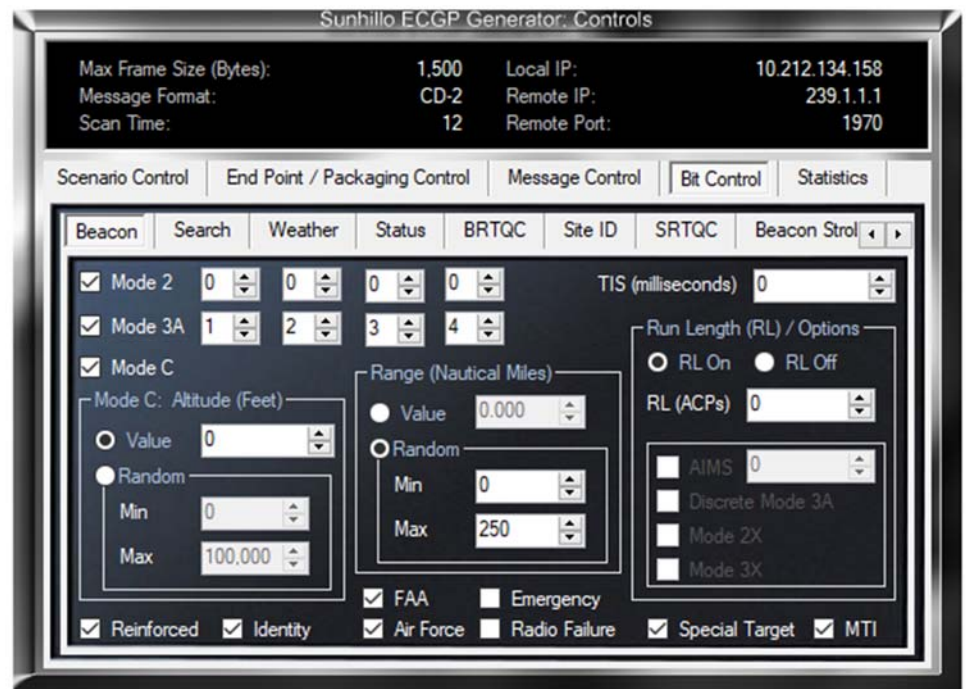

- ➔ Scenario Control for configuration of numerous ARTCC and Sites
- ➔ Generates CD-1, CD-2, CD-2 Fullscan, ASR-9, MAR, ARSR-3, ARSR-4, and more
- ➔ Endpoint Control for Unicast, Broadcast, or Multicast
- ➔ Message Control to select radar message type

Sunhillo's ECGP Generator is a Windows application used to generate ECGP framed radar data on a network.

The ECGP Generator can be used as a load generator or as a conversion test tool. It can generate targets in fixed or random locations in order to test target applications processing ECGP UDP radar data.

Quickly set up your ARTCC and Sites, Endpoint Control, and Message Control, then click Play and you are ready to begin testing your software.
