

SUNHILLO **SDDS-IP**

Sunhillo's SDDS-IP (Surveillance Data Distribution System for IP-centric topologies) is a groundbreaking solution designed to level the playing field making the safe interoperability of surveillance data a reality

Fully integrated IP system that combines multiple dissimilar radar sources for surveillance distribution

SDDS-IP Key System Features

- Easy to use graphical data flow editor
- Extensive support for ASTERIX
- Networking and Serial Protocols Supported
- ASTERIX Conversions & Validation
- Filtering (ASTERIX, Geographic, Aircraft)
- Surveillance Data Fusion
- SDDS core software, SureLine®, is deployed to 50+ countries globally
